MEDICATION ORDERS:

NOTE: Prescribing Orbactiv® in the absence of a proven or strongly suspected bacterial infection is unlikely to provide benefit to the patient and increases the risk of the development of drug resistant bacteria.

Dilution: Use ONLY 5% dextrose in sterile water (D5W) for dilution. **Do NOT use Normal Saline for dilution or flushing of IV line** as it is incompatible with Orbactiv® and may cause precipitation of the drug. Therefore, other intravenous substances, additives, or other medications mixed in normal saline should **NOT** be added to Orbactiv® vials or infused simultaneously through the same IV line or through a common intravenous port. If the same intravenous line is used for sequential infusion of additional medications, the line should be flushed before and after infusion with D5W.

MEDICATION:

Orbactiv® (oritavancin) in 1000mL of D5W to infuse over 3 hours
Follow infusion with a 30 minute post observation.
